Comments to the author(s)

Well written paper. Here are some suggestions. You have indicated the antibiotic as “Augmentin”. It is better to use the active material name with doses instead of brand name. I mean use “amoxicillin/clavulonate 400/57 mg PO q12h” instead of “augmentin”.

Additionally, some patients information are repeated both in introduction and discussion part. The beginning of discussion includes repetition of introduction. You can directly start with discussion with “Our case describes air injection.....”

Some minor revision advices are written to the authors. The most important one is to write the antibiotic without its brand name but with doses.
